ABSTRACT

The 1996 National Household Education Survey (NHES:96) was a random digit dial telephone survey of households developed by the National Center for Education Statistics and conducted by Westat, Inc. The NHES:96 included two topical survey components, "Parent and Family Involvement in Education," (PFI) which collected data about family involvement in children's schooling, and "Civic Involvement," (CI) which collected data about participation in civic activities and attitudes toward government. This manual provides documentation and guidance for users of the public release data file for the Parent and Family Involvement in Education and Civic Involvement (Parent PFI/CI) component of the NHES:96. This volume contains a description of the Parent PFI/CI file and a discussion of data considerations and anomalies. The file consists of data from all completed Parent PFI/CI interviews. There are 3 records for each interview, so the file contains 62,376 records for the 20,792 completed interviews. Data items are listed in the following order: (1) system variables; (2) household membership variables; (3) questionnaire item variables; (4) household characteristic variables; (5) derived variables; (6) weighting and variance estimation variables; and (7) imputation flag variables. Included as appendixes are the public file layout, the Statistical Analysis System code for creating derived variables, the codebook for the Parent PFI/CI public data file, and directions and sample code for linking NHES:96 files. This volume is meant to be read in conjunction with Volume I, an overview of survey methodology. (SLD)

The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

INTRODUCTION

The 1996 National Household Education Survey (NHES:96) was a random digit dial (RDD) telephone survey of households developed by the National Center for Education Statistics (NCES) and conducted by Westat, Inc. The NHES:96 included two topical survey components:

- Parent and Family Involvement in Education (PFI), in which data were collected about types and frequency of family involvement in children's school, school practices to involve and support families, and learning activities with children outside of school; and

- Civic Involvement (CI), which included sources of information about government, knowledge about government, community service participation, political participation, and attitudes related to democratic values and government.

There were three populations of interest for the NHES:96:

- Children 3 years old through grade 12, whose parents responded to PFI items, and children 6th through 12th grades, whose parents also responded to CI items;

- Students in grades 6 through 12, who, in addition to their parents, responded to CI items and to a small number of PFI items; and

- Adults, defined as persons 18 years old or older, not enrolled in grade 12 or below, and not on active duty in the military, whose responses to CI items provided estimates representative of all civilian U.S. adults.

In addition to the major topical components, the NHES:96 Screener collected demographic and educational information on all members in every household contacted, whether or not anyone in the household was selected for an extended interview. (The term "extended interview" refers to the interview pertaining to the topical components of the study, that is, the Parent PFI/CI, the Youth CI, or the Adult CI interviews.)

This manual, the *NHES:96 Data File User's Manual, Volume III: Parent and Family Involvement in Education and Civic Involvement*, provides documentation and guidance for users of the public release data file for the Parent and Family Involvement in Education and Civic Involvement (Parent PFI/CI) component of the 1996 National Household Education Survey (NHES:96). This volume contains a description of the Parent PFI/CI data file and a discussion of data considerations and anomalies. Included as appendixes are the public file layout, SAS code for creating derived variables, the codebook for the Parent PFI/CI public data file, and directions and sample code for linking NHES:96 files.

Volume III is meant to be read in conjunction with the *NHES:96 Data File User's Manual, Volume I*. More information about the purpose of the study, the sample design, the other survey components, the data collection instruments, and data collection and data processing procedures is contained in the *NHES:96 Data File User's Manual, Volume I*. Information about the Household & Library public data file can be found in Volume II, and information about the Youth Civic Involvement public data file (Youth CI) and the Adult Civic Involvement public data file (Adult CI) can be found in Volumes IV and V of the manual, respectively.

6. GUIDE TO THE DATA FILE AND CODEBOOK

6.1 Content and Organization of the Data File

This section describes the content of the Parent PFI/CI public release data file constructed for the NHES:96. This file contains data from all completed Parent PFI/CI interviews. There are three records for each Parent PFI/CI interview completed, so the file contains 62,376 records for the 20,792 completed interviews. The file is organized so that logically related sets of variables are grouped together. The data items are listed in the file in the following order: system variables, household membership variables, questionnaire item variables, household characteristics variables, derived variables, weighting and variance estimation variables, and imputation flag variables.

A list of all the variables in the Parent PFI/CI data file is shown in appendix B. The VARIABLE NAME column displays the unique identifier for each variable in the data file. The VARIABLE LABEL column displays a short description associated with the variable. The FORMAT column indicates if a variable has a numeric ("N") or a character ("A") format. All of the variables in the Parent PFI/CI data file except MAINRSLT, GRADE, GRADEEQ, HOMET, HOMEK, HOMEP, and ALLGRADE have numeric formats. The RECORD NUMBER column indicates whether the variable is located on the first, second, or third record. The LENGTH column indicates the length of the variable by the number of digits. The length descriptor also includes the number of digits found after the decimal point for noninteger numeric variables (e.g., weight variables). The position of the variable is indicated in the START and END column which indicates the position in the file where the variable begins and ends.

A value of "-1" for any variable on the data file indicates that a case was part of a legitimate skip. For example, if the mother learned English as her first language (MOMLANG, PL1), the question about what language she speaks most at home (MOMSPEAK, PL2) would have a value of -1, because the question was inapplicable. This convention of assigning -1 to all legitimate skips applies to all NHES data files.

The NHES:96 data files are provided on CD-ROM and are accessible through an Electronic CodeBook (ECB) that allows data users to view variable frequencies, tag variables for extraction, and create the SAS, SPSS for DOS, or SPSS for Windows code needed to create an extract file for analysis purposes. The ECB contains all of the NHES:96 data sets: the Household & Library file, the Parent PFI/CI file, the Youth CI file, and the Adult CI file. The ECB also contains all data sets for previous NHES collections and documentation for every file. Instructions for using the CD-ROM and ECB are provided in a separate document, the *National Household Education Survey: NHES:91/93/95/96 Electronic CodeBook (ECB) User's Guide* (Collins and Chandler forthcoming). The sections that follow describe the contents of the Parent PFI/CI data file.

6.1.1 System Variables

System variables are created during the conduct of an interview and are instrumental in the successful administration of the interview. Their creation is transparent to the interviewer and to the respondent. System variables fall into two categories: linking variables (record identifiers or ID numbers) and interview status variables. Linking variables are record identifiers that provide a link to other interviews completed in the same household. See appendix E for more information about linking between files. Status variables are set at the completion of each interview to define interview status.

BASMID is the unique 12-digit identifier variable for the interview. It is composed of the eight-digit household identifier, the interview subject's two-digit household-member person number, and the two-digit number, 01, that indicates that the interview was a Parent PFI/CI interview.

ENUMID is the 10-digit identifier variable for the subject of the interview. It is composed of the eight-digit household identifier and the interview subject's two-digit household-member person number. ENUMID can be used to link the Parent PFI/CI interview about a youth to the youth's own Youth CI interview. See appendix E for instructions for linking the Parent PFI/CI and Youth CI interviews.

BASEID is the eight-digit identifier for the household. This ID number also forms the first eight digits of interview ID numbers for other interviews in the household, providing a means of linking interviews within the same household. See appendix E for instructions in linking the NHES:96 data files.

MAINRSLT (main result) is the variable that holds the final completion code for the Parent PFI/CI interview.

The values for MAINRSLT are:

CN = Complete Parent PFI/CI interview; sampled child is a preschooler
CE = Complete Parent PFI/CI interview; sampled child is an elementary schooler
CM = Complete Parent PFI/CI interview; sampled child is a middle/junior high schooler
CS = Complete Parent PFI/CI interview; sampled child is a high schooler
CH = Complete Parent PFI/CI interview; sampled child is a home schooler

ENGLSPAN is the variable that indicates whether the interview was conducted in English or in Spanish.

The values for ENGLSPAN are:

1 = Interview was conducted in English
2 = Interview was conducted in Spanish

6.1.2 Household Membership Variables

All household members were enumerated in the Screener. Data collected included each person's first name, age and sex (S6), educational status (SX7 through SX14), and demographic characteristics (SX15 through SX22 and SX27 through SX33OV).

In the extended interview, the relationships of all other household members were collected (PA5). If the respondent relationship was recorded as mother or father, an additional question (PA6 or PA7) was asked to gather the specific relationship (birth, adoptive, step, or foster). The information collected in this sequence was used in conjunction with the respondent relationship collected in the Screener (SX24) to determine if the child had a mother (birth, adoptive, step, or foster mother) or father (birth, adoptive, step, or foster father) living in the household.

The gender collected during the household enumeration in the Screener (S6) was used to drive the gender-based wording of subsequent questions throughout the Screener and, if appropriate, the extended interview. The age of the subject was verified in the extended interview by collecting the month and year of birth (PA1).

The household member information is stored on the public release data file in the following order: information about the subject of the interview (the sampled child), information about the respondent to the interview (the most knowledgeable parent/guardian), information about the mother, information about the father, and information on all other household members (other than the subject, the mother, and the father). Please note that the extended respondent information is repeated in one of two places. If the extended respondent is the mother or the father, that information will be repeated in the mother or father section. If the extended respondent is someone other than the mother or the father, that information will be contained in both the extended respondent section and in another household member section (other household members appear in descending order by age). The variables appear on the data file as follows:

CHILDNUM is the sampled child's household member person number.

AGE95 is the sampled child's age as of December 31, 1995.

SEX is the sampled child's sex.

RACE indicates the sampled child's race.

HISPANIC indicates whether the sampled child is Hispanic.

OTHRAC indicates the child's race if "Some other race" was reported at RACE (SX21).

RESPNUM is the extended interview respondent's household member person number.

RESPAGE is the extended interview respondent's age.

RESPSEX is the extended interview respondent's sex.

RESRELN is the extended interview respondent's relationship to the sampled child.

MOMNUM is the household member person number of the sampled child's mother or female guardian.

MOMAGE is the age of the mother or female guardian.

MOMTYPE is the type of mother (birth, adoptive, step, or foster).

DADNUM is the household member person number of the sampled child's father or male guardian.

DADAGE is the age of the father or male guardian.

DADTYPE is the type of father (birth, adoptive, step, or foster).

AGE1 is the age of the oldest household member other than the sampled child and parents.

SEX1 is the sex of the oldest household member other than the sampled child and parents.

RELATN1 is the relationship to the child of the oldest household member other than the sampled child and parents.

AGE(*n*), **SEX(*n*)**, and **RELATN(*n*)** variables are then repeated for each other household member using sequential numbers, e.g., AGE2, SEX2, RELATN2, and so on up to a maximum of fifteen other household members. The file contains space for data for up to fifteen household members but no household reported more than twelve members.

6.1.3 Questionnaire Item Variables

The questionnaire item variables appear on the file in the same order as they were asked. Refer to the questionnaire in Volume I, appendix A for the order. The items on enrollment and grade in school appear in the Screener and the Parent PFI/CI interview. The Parent PFI/CI responses have been retained, since they are responses given by the parent/guardian most knowledgeable about the sampled child.

Some variables were excluded from the file for confidentiality reasons. These include the names of household members, verbatim string responses that might identify persons or places, and the individual ZIP Codes. Some of these variables are included in a separate restricted-use data file (see section 6.3 below). The Parent PFI/CI questionnaire appears with the Screener, the Parent PFI/CI, and the Adult CI questionnaires in Volume I, appendix A; variable names are provided to the left of each question. Those followed by "/R" appear only on a restricted-use data file that may be obtained through a special licensing agreement with NCES.

"Code all that apply" questions allowed the respondent to select more than one of the answer categories given. As the responses were given, the interviewer coded the number appearing on the screen that corresponded to each response given. The numbered responses were recoded into one variable for each response category as "yes/no" codes. If the respondent gave the particular response, the associated variable was coded "yes." Otherwise, the associated variable was coded "no." There are five "code all that apply" questions in the Parent PFI/CI questionnaire: "For which grades was (CHILD) schooled at home?" (PB7), "What are the main reasons you decided to school (CHILD)?" (PB8), "What grade or grades did (he/she) repeat?" (PE8), "What (have you/has she) been doing in the past 4 weeks to find work?" (PL10), and "What (have you/has he) been doing in the past 4 weeks to find work?" (PM9).

If a value for a response option is found in the questionnaire, but not found in the frequency, no respondent selected that response. The variables that meet this condition include FSCOUP (PF2F), "Acted as a volunteer at the (school/Head Start program/PROGRAM) or served on a committee?" and NRLSTUN2 (PN6OV2, unit for the second non-residential parent), "How long has it been since (CHILD) last had contact with (his/her) (mother/father)?". For the variable FSCOUP, the category "neither" was not selected by any respondent and for the variable NRLSTUN2, the category "days" was not selected by any respondent.

There is a repeating series of questions in the non-residential parent section because questions could be asked twice if the child does not live with either parent. Variable names and labels reflect the sequence of the series. For example, NRCONTA1 (PN4) is whether the child currently has any contact with the first non-residential parent and NRSEEY2 (PN5OV3) is how many times in the past year the child has seen the second non-residential parent.

6.1.4 Household Characteristics Variables

Household characteristics variables are variables that reflect characteristics of the household as a unit. For example, questions were asked about whether the home was owned or rented and the type and size of community where the household was located. They were asked at the end of the first Parent PFI/CI interview in the household. They appear on the file in the same order as they were asked. Because they are actually part of the Screener, refer to that instrument in Volume I, appendix A for the questions and their order.

6.1.5 Derived Variables

Derived variables were developed and included in the Parent PFI/CI public use data file to aid users in their analyses. The derived variables fall into two categories: questionnaire item variables and counter variables. Questionnaire item-derived variables were created by combining two or more items from the questionnaire. Counter-derived variables were created by counting the number of persons with specific characteristics enumerated in the household. The linked-derived variables created by using the respondent's ZIP Code to extract data from the 1990 Census of Population Summary Tape File 3B (STF3B) are available on a restricted-use file. STATE, the linked-derived variable taken from the Genesys sample file used for the NHES:96 sample of telephone numbers, is available on the Household & Library file.

The derived variables appear together on the file in their own section in alphabetical order. They are listed below in the same order with an explanation of how they were derived. The actual SAS code to create these variables is found in appendix C, with the exception of counter variables and CENREG (Census region).

ALLGRADE is a derived variable that identifies the enrollment status, the grade level of children in graded schools, and the grade level equivalent for children in ungraded schools, special education programs, or home school. ALLGRADE was created using the variables GRADE (PB4) and GRADEEQ (PB5).

The values for ALLGRADE are:

0 = Not enrolled
N = Nursery/preschool/prekindergarten/Head Start
K = Transitional kindergarten, kindergarten, and prefirst grade
1 = First grade or equivalent
2 = Second grade or equivalent
3 = Third grade or equivalent
4 = Fourth grade or equivalent
5 = Fifth grade or equivalent
6 = Sixth grade or equivalent
7 = Seventh grade or equivalent
8 = Eighth grade or equivalent
9 = Ninth grade or equivalent
10 = Tenth grade or equivalent
11 = Eleventh grade or equivalent
12 = Twelfth grade or equivalent
U = Ungraded/no equivalent

CENREG is a derived variable that identifies the Census region in which the subject child lives. This variable is created by linking states and telephone area codes of sampled numbers.

The following states and the District of Columbia are in each Census region:

Northeast: CT, MA, ME, NH, NJ, NY, PA, RI, VT
South: AL, AR, DC, DE, FL, GA, KY, LA, MD, MS, NC, OK, SC, TN, TX, VA, WV
Midwest: IA, IL, IN, KS, MI, MN, MO, ND, NE, OH, SD, WI
West: AK, AZ, CA, CO, HI, ID, MT, NM, NV, OR, UT, WA, WY

The values for CENREG are:

1 = Northeast
2 = South
3 = Midwest
4 = West

COMMUNTY is a derived variable representing the respondent's report of the size of the community in which the household is located. COMMUNTY was created from the variables HCCOMMUN (SX31), HCSUB (SX31OV), and HCCITY (SX31OV2).

The values for COMMUNTY are:

1 = Very large city (over 500,000 people)
2 = Large city (100,000 to 500,000 people)
3 = Medium sized city (50,000 to 100,000 people)
4 = Suburb of a very large city
5 = Suburb of a large city
6 = Suburb of a medium city
7 = Small city or town of fewer than 50,000 people that is not a suburb of a larger city
8 = Rural or farming community

DADEMPLD is the derived variable that indicates the employment status of the father (birth/adoptive/step/foster/guardian). DADEMPLD was created using the variables DADWORK (PM5), DADLEAVE (PM6), DADHOURS (PM7), DADLOOK (PM8), and DADPUBL, DADPRIV, DADEMPL, DADREL, and DADANSAD (all from PM9).

The values for DADEMPLD are:

1 = Working 35 hours or more per week
2 = Working less than 35 hours per week
3 = Looking for work
4 = Not in the labor force
-1 = No father for the subject child in the household

DISABLTY is the derived variable that indicates whether the sampled child under 6th grade has a disability. The component items were not asked about children in grades 6 through 12. DISABLTY was created using the variables HDLEARN, HDRETARD, HDSPEECH, HDDISTRB, HDDEAFIM, HDBLNDIM, HDORTHO and HDOTHER (all from PJ2), AGE95, the derived variable ALLGRADE, and the system variable, MAINRSLT.

The values for DISABLTY are:

1 = Currently has a disability
2 = Does not currently have a disability
-1 = Child in grade 6 through 12

FAMILY is the derived variable that describes the family type, based on the presence of parents and siblings. FAMILY was created using the derived variables HHPARN1 and NUMSIBS.

The values for FAMILY are:

1 = Two parents and siblings
2 = Two parents and no siblings
3 = One parent and siblings
4 = One parent and no siblings
5 = Other

HH18OVER is the counter-derived variable that indicates the number of household members age 18 and older. The screener responses to HHAGE1 through HHAGE16 (S6), found in the Household & Library file, were counted for this variable.

HHDAD is the derived variable that indicates whether the birth, adoptive, step, or foster father or male guardian of the subject child resides in the household with him/her. HHDAD was created using the variables MOMTYPE (PA6), DADTYPE(PA7), and RESPSEX.

The values for HHDAD are:

1 = Birth or adoptive father
2 = Step or foster father
3 = Male respondent/no mother or father in household
4 = Else

HHMOM is the derived variable that indicates whether the birth, adoptive, step, or foster mother or female guardian of the subject child resides in the household with him/her. HHMOM was created using the variables MOMTYPE (PA6), DADTYPE(PA7), and RESPSEX.

The values for HHMOM are:

1 = Birth or adoptive mother
2 = Step or foster mother
3 = Female respondent/no mother or father in household
4 = Else

HHPARN1 is the derived variable that designates by broad classification the subject child's parents who reside in the household. It denotes a two-parent family, a one-parent family, or a family with nonparent guardians. HHPARN1 was created using the derived variables HHMOM and HHDAD.

The values for HHPARN1 are:

1 = Mother (birth, adoptive, step, or foster) and father (birth, adoptive, step, or foster)
2 = Mother (birth, adoptive, step, or foster) only
3 = Father (birth, adoptive, step, or foster) only
4 = Nonparent guardian(s)

HHTOTAL is the counter-derived variable that indicates the total number of household members. The screener responses to HHAGE1 through HHAGE16 (S6), found in the Household & Library file, were examined for this variable.

HHUNDR6 is the counter-derived variable that indicates the number of household members younger than 6 years old. The screener responses to HHAGE1 through HHAGE16 (S6), found in the Household & Library file, were examined for this variable.

HHUNDR13 is the counter-derived variable that indicates the number of household members younger than 13 years old. The screener responses to HHAGE1 through HHAGE16 (S6), found in the Household & Library file, were examined for this variable.

HHUNDR18 is the counter-derived variable that indicates the number of household members younger than 18 years old. The screener responses to HHAGE1 through HHAGE16 (S6), found in the Household & Library file, were examined for this variable.

HHUNDR21 is the counter-derived variable that indicates the number of household members younger than 21 years old. The screener responses to HHAGE1 through HHAGE16 (S6), found in the Household & Library file, were examined for this variable.

LANGUAGE is the derived variable that describes whether the language(s) spoken most often at home by the parent(s)/guardian(s) in the household is English. LANGUAGE was created using the variables MOMLANG (PL1), MOMSPEAK (PL2), DADLANG (PM1), and DADSPEAK (PM2).

The values for LANGUAGE are:

1 = Both/only parent(s) main language at home is English
2 = One of two parents speaks a non-English language most at home
3 = Both/only parent(s) speak a non-English language most at home

LASTCON1 and LASTCON2 are the derived variables that indicate the number of months since the sampled child last had contact with his/her nonresidential parent, for children that do not have regular contact with a nonresidential parent. Specifically, LASTCON1 and LASTCON2 give the time since the last contact between the nonresidential parent and the child for those cases in which (1) it was reported that the child does not currently have regular contact with the parent, or (2) it was reported that the child does not talk by phone with, get a letter from, or see the nonresidential parent in a typical month. This variable can be used to examine issues such as nonresident parent involvement with the school by the length of time since the nonresident parent had contact with the child. LASTCON1 was created using the variables NRLSTNU1 (PN6OV1) and NRLSTUN1 (PN6OV2). If there is more than one nonresidential parent, LASTCON2 was used to describe when the child last had contact with the second nonresidential parent. LASTCON2 was created using the variables NRLSTNU2 (PN6OV1) and NRLSTUN2 (PN6OV2). These are continuous variables ranging from 1 to 216 for LASTCON1 and 1 to 192 for LASTCON2. The values for LASTCON1 and LASTCON2 equal -1 when the sampled child has no non-residential parents; when the nonresident parent is deceased; when the child never had any contact with the nonresidential parent; or when the child has some contact with the nonresidential parent in a typical month. The values of LASTCON1 and LASTCON2 could not and do not exceed the child's age in months.

LASTLIV1 and LASTLIV2 are the derived variables that indicate the number of months since the sampled child last lived with his/her nonresidential parent. These variables would be -1 if the child had no nonresidential parents; if the child lived half of the time with his or her nonresidential parent; if the child never had contact with the nonresidential parent, or if the nonresidential parent never lived in the household with the child. If there is more than one nonresidential parent, LASTLIV2 was used to describe when the second nonresidential parent last lived with the child. LASTLIV1 was created using the variables NRLIVNU1 (PN3OV1) and NRLIVUN1 (PN3OV2). LASTLIV2 was created using the variables NRLIVNU2 (PN3OV1) and NRLIVUN2 (PN3OV2).

These are continuous variables ranging from 1 to 216 for LASTLIV1 and 1 to 204 for LASTLIV2. The values of LASTLIV1 and LASTLIV2 could not and do not exceed the child's age in months.

MOMEMPLD is the derived variable that indicates the employment status of the mother (birth/adoptive/step/foster/guardian). MOMEMPLD was created using the variables MOMWORK (PL5), MOMLEAVE (PL6), MOMHOURS (PL7), MOMLOOK (PL9), and MOMPUBL, MOMPRIV, MOMEMPL, MOMREL, and MOMANSAD (all from PL10).

The values for MOMEMPLD are:

1 = Working 35 hours or more per week
2 = Working less than 35 hours per week
3 = Looking for work
4 = Not in the labor force
-1 = No mom in household

MOMFTFY is the derived variable that indicates if the mother (birth/adoptive/step/foster/guardian respondent) of the subject child currently works full time and has worked 12 months of the past year. MOMFTFY was created using the variables MOMWORK (PL5), MOMMTHS (PL8), and the derived variable MOMEMPLD.

The values for MOMFTFY are:

1 = Full time (35 hours of more) full year
2 = Less than full time or less than full year
3 = Not employed during year
-1 = No mom in household

NUMSIBS is a counter-derived variable indicating the total number of siblings with whom the sampled child lives.

PARGRADE is the derived variable that indicates the highest level of education for the subject child's parents or nonparent guardians who reside in the household. PARGRADE was created using the variables MOMGRADE (PL3), MOMDIPL (PL4), DADGRADE (PM3), and DADDIPL (PM4).

The values for PARGRADE are:

1 = Less than high school
2 = High school graduate or equivalent
3 = Vocational/technical education after high school or some college
4 = College graduate
5 = Graduate or professional school

RACEETHN denotes both the race and ethnicity of the child. If the respondent designates the child's ethnicity as Hispanic, RACEETHN is Hispanic regardless of whether RACE was classified as white, black, or another race. RACEETHN was created using the variables RACE (SX21), OTHRAC (SX21A), and HISPANIC (SX22).

The values for RACEETHN are:

1 = White, non-Hispanic
2 = Black, non-Hispanic
3 = Hispanic
4 = All other races (e.g., American Indian or Alaska Native, Asian or Pacific Islander), non-Hispanic

SCHLGRAD is a derived variable that classifies the type of school the subject child attends based on the highest and lowest grades in the school. SCHLGRAD was created using SLOW (PD7) and SHIGH (PD8). Note that although this variable also appears on the Youth CI file, the values are not the same in both files.

The values for SCHLGRAD are:

1 = Early childcare (low grade N, K, T, P; high grade N, K, T, P)
2 = Elementary school (low grade N, K, T, P, 1 to 3; high grade 1 to 8)
3 = Middle/junior high school (low grade 4 to 9; high grade 4 to 9)
4 = High school (low grade 7 to 12; high grade 10 to 12)
5 = Combined grades school
-1 = No school or program

SCHLTYPE is a derived variable that classifies the school currently attended as either public or private. Schools that are public are further classified as being chosen or assigned, and schools that are private are also classified as being church-related or not church-related. SCHLTYPE was created using the variables SPUBLIC (PD1), SCHOICE (PD3), and SRELGON (PD4).

The values for SCHLTYPE are:

1 = Public, assigned
2 = Public, chosen
3 = Private, church-related
4 = Private, not church-related
-1 = Home school or nursery path

SCNUMSTU is a derived variable that classifies the estimated number of students in the sampled child's school. SCNUMSTU was created using the variables SLOW (PD7), SHIGH (PD8), SNUMSTUD (PD9), and SNUMGRAD (PD9OV).

The values for SCNUMSTU are:

1 = Under 300
2 = 300-599
3 = 600-999
4 = 1,000 or more
-1 = Home school or nursery path

6.1.6 Weighting and Variance Estimation Variables

The first variable in this section of the file is FPWT. It is the variable that should be used as the weight variable to estimate the characteristics of children. This weight contains all of the adjustments for the probabilities of selection, nonresponse, and undercoverage as described in Volume I, chapter 3.

The 80 replicate weights, FPWTR1 to FPWTR80, are the next variables in this section. These replicate weights can be used with the WesVarPC Windows-based software program to produce estimates of the sampling errors of the estimates. More details on how the replicate weights were created and how they can be used with WesVarPC are given in Volume I, chapter 3, along with an approximation method that does not involve using the WesVarPC procedure.

The remaining two variables in this section are PSTRATUM and PPSU. These variables are provided to enable users to compute sampling errors using Taylor Series approximations, such as the SUDAAN procedure. The methods used to construct the values for PSTRATUM and PPSU are also discussed in Volume I, chapter 3.

6.1.7 Imputation Flag Variables

Item nonresponse occurred when some, but not all, of the responses were missing from an otherwise cooperating respondent. For all the items on the Parent PFI/CI public use file, except the government knowledge questions (PK15a-e and PK16a-e), the missing data were imputed, or "filled in," to help users of the data. For each variable involved in imputation, an imputation flag variable was created. If the imputation flag is equal to 0, then no imputation was performed on that case. This flag can be used to identify imputed values. Volume I, section 3.8 discusses the meaning of values assigned to the imputation flags.

The naming convention for the imputation flag variables was to drop the last letter of the variable name and replace it with an "f." For example, the imputation flag for SEX is SEF. This naming convention holds true for all Parent PFI/CI variables except for variables that originally end in "f," variables that will become confused with other variables when the last letter is dropped, or variables that end in a number. In these cases, the letter before the last letter or last digit is dropped and replaced with an "f." For example, the imputation flag for NRBAC2 (PN8) is NRBAF2. The imputation flags appear on the file in the same order as the items.

6.1.8 Numeric and Character Variables

All of the variables in the Parent PFI/CI file have numeric formats except MAINRSLT and the variables that indicate the grade a person is attending, GRADE (PB4), or the grade equivalent GRADEEQ (PB5), SLOW (PD7), SHIGH (PD8), and ALLGRADE (a derived variable).

6.2 Guide to the Codebook

The codebook, shown in appendix D, contains complete descriptions of the contents of the data file. The codebook contains system variables, household membership variables, questionnaire variables, household characteristics variables, derived variables, weighting and variance estimation variables, and imputation flag variables. The codebook provides all the pertinent information for the variables in the file, including the variable name, the question wording, the position and format of the variable in the file, and the responses to the item. The unweighted frequency, unweighted percent, and weighted percent are provided with each response. Figure 6-1 provides a description of each of the items appearing in the codebook.

6.3 Public and Proprietary Data Files

This manual is designed to assist users of the public use Parent PFI/CI data file. The public use file contains all the variables detailed above but does not contain certain variables excluded from the file for confidentiality reasons. These include the names of household members, verbatim string responses that might identify persons or places, and respondents' individual ZIP Codes (HZIPCODE). Some of these variables (e.g., verbatim strings of other-specify categories, HZIPCODE) that are excluded from the public file are included on a separate proprietary, or restricted-use, file. These variables are indicated with a "/R" on the Parent PFI/CI questionnaire in Volume I, appendix A. The Parent PFI/CI proprietary data file also contains close to 100 ZIP code variables from the 1990 Census of Population Summary Tape File 3B (STF3B), including the median household income of the area, the level of community mobility in the area, and the percentage of owner-occupied households in the area. The proprietary data files may be obtained through a special licensing agreement with NCES. Contact NCES for details on how to become licensed.

6.4 Linking the Household & Library File to Other NHES:96 Data Files

It is possible to link the Household & Library file to the Parent PFI/CI, the Youth CI, and the Adult CI data files. Instructions for doing so are located in appendix E.

Figure 6-1.—Example of the codebook format

(1) HOMESCHL = (2) PB2-CHILD BEING SCHOOLED AT HOME
(3) PB2 Some parents decide to educate their children at home rather than sending them to school. Is (CHILD) being schooled at home?

(4) RECORD: 1 POSITION: 167-168
(5) FORMAT: N2

(6) RESPONSE	(7) CODES	(8) FREQ	(9) UNWGTD PERCENT	(10) WGTD PERCENT
1 YES	1	251	1.2%	1.5%
2 NO	2	17821	85.7%	98.5%
RESERVED CODES				
-1 INAPPLICABLE	-1	2720	13.1%	(MISS)
TOTALS		20792	100.0%	100.0%

DESCRIPTIONS:

(1) Variable name: This is the variable name associated with each item. This is the unique identifier present in the SAS or SPSS data file.

(2) Variable label: A short label, which is associated with each of the variables, is presented here. This label appears in the SAS or SPSS data file. Labels contain the questionnaire item numbers. Labels that begin with the letter "D" indicate a derived variable.

(3) Question wording: This is the exact question wording as it appeared in the questionnaire.

(4) Record and position: These provide the record number (1, 2, or 3) and the starting and ending position of the variable in the raw data file on tape.

(5) Format: This provides the variable type, its width, and the number of positions after the decimal point, if necessary. A data type of "N" represents numeric variables and "A" represents character variables. In this example, HOMESCHL is a numeric variable with a length of 2.

(6) Response categories: This column provides the response categories for the variable.

(7) Response codes: This column provides the actual numeric/alphanumeric codes present in the data files.

(8) Unweighted frequency counts: This column displays the unweighted frequency counts for this variable. The counts for missing values will also be included for the unweighted values, but not for the weighted values.

(9) Unweighted percentages: This column displays the unweighted frequency counts from the previous column as percentages. This column will also contain percentages for missing values.

(10) Weighted percentages: This column displays the percentages of frequency counts weighted up to the population. This column will not include percentages for missing values.

7. DATA CONSIDERATIONS AND ANOMALIES

The purpose of this section is to bring to the user's attention certain data considerations and data anomalies in the NHES:96 Parent PFI/CI survey data; to describe the nature of those anomalies; and, where appropriate, to identify possible means of taking them into account when analyzing the Parent PFI/CI data.

7.1 Number of Students in Child's Grade

For the variable SNUMGRAD (number of students in the child's grade), there were nine parents who reported 2,000 to 4,000 students in their child's grade. Although these numbers are not plausible, they were reported by the parent respondents and thus were left on the data file.

7.2 School Enrollment and Center-based Care

For a small number of cases (28 cases), parents reported that their child was enrolled in nursery school, kindergarten, or school when asked about enrollment (ENROLL (PB1)) but later did not report that their child was attending Head Start (HSNOW (PC1)) or attending a day care center, nursery school, preschool, or prekindergarten program (NCBNOW (PC2)). The NHES:96 used the standard CPS question to obtain estimates for school enrollment and specific questions about center-based care to obtain estimates for early childhood program participation. From past experience with these questions, it is known that there are parents who consider their child to be in school but not in center-based care (e.g., the child may be in family day care). In the NHES:96, there were 234 parents who reported that their child was not enrolled (ENROLL), but was either attending Head Start (HSNOW) or attending a day care center, nursery school, preschool, or prekindergarten program (NCBNOW). Thus, although the school enrollment and center based care questions are extremely similar, they are not identical and therefore there is some inconsistency in response to these questions.

7.3 Age of Child in Preschool

The age range for children who were considered preschoolers was age 3 through age 6. However, there was one case in which a parent indicated that she had a 15-year-old child who was in preschool because he needed special education. This case is in the preschool path.

7.4 Age of Children Being Schooled at Home

Because few youth who were 18 years old or older were expected to be schooled at home, skip patterns in the Screener and Parent PFI/CI interview were designed so that these youth would not receive the home school questions. However, skip patterns were overridden for six cases. In these cases, youth who were 18-years-old and schooled at home were administered the home school questions.

7.5 Derived Variables in Previous NHES Surveys

Many of the derived variables are the same across NHES survey years. However, LANGUAGE in the NHES:96 is not identical with that variable in the NHES:95. In the NHES:96, respondents' answers that they spoke Spanish and English equally were coded as a separate category, and later recoded to indicate that the person was an English speaker. This category was not included as an option in the NHES:95. Thus the code used to derive LANGUAGE is different in the data files for the two surveys.

7.6 Type of Community in Which the Household is Located

The NHES:96 Parent PFI/CI file includes a measure of the urbanicity of the sampled household, COMMUNTY. This variable was copied from the Household & Library data file to the corresponding record on the Parent PFI/CI file. The creation of the derived variable COMMUNTY was described in chapter 6. At the household level, the item response rates for the variables used to create COMMUNTY were somewhat lower than most variables in the NHES. HCCOMMUN (SX31, the type of community) had an item response rate of 92.5 percent; HCSUB (SX31OV, size of city to which a suburb belonged, if applicable) had an item response rate of 93.1 percent; and HCCITY (SX31OV2, size of the city, if applicable) had an item response rate of 95.7 percent. When these three variable were combined to create the derived variable COMMUNTY, 85.3 percent had unimputed responses for all three variables. Some respondents simply do not know the size of the community in which they live. This suggests the possibility that some who responded to the questions may have guessed, although this cannot be measured directly. Analysts should keep this in mind when using the variable COMMUNTY, as this variable may contain response error.

7.7 Correspondence Between Age and Grade

In any survey in which information on people's ages and grades in school (or grade equivalents) is collected, some cases appear in which age and grade do not seem to correspond. This is true for each year of the NHES, the CPS October Educational Supplement, and other surveys. In many cases in the NHES, the situation behind these discrepancies are unclear -- it is only known that a CATI edit was tripped and the interviewer had to confirm the information and enter it again. In some cases, interviewers provide more complete explanations. For example, a person may be in a grade far lower than his/her age would indicate, but may be retarded and in a special education program with a low grade equivalent. Some adults long past the modal age of high school completion may report a secondary grade because they are enrolled in adult nighttime high school. Analysts may wish to examine these unusual cases and make their own decisions about how to treat these cases in their analyses.

7.8 Income to the Nearest Thousand Dollars

In those households whose income category and household size indicated that they may be at or below the poverty line, household income to the nearest thousand dollars was requested. As the values in the data file show, some respondents did not answer in thousands, but gave somewhat more specific answers. Rather than lose this information, the exact response was retained.

APPENDIX B

PARENT PFI/CI PUBLIC FILE LAYOUT IN POSITION ORDER

NOTE: The variables RECNUM is located in the last column of each record (column 1,024). The value of RECNUM varies with the record number of a given case. RECNUM is set to one on the first record of every case, 2 for the second record, and 3 for the third record. Each case on the Parent and Family Involvement in Education and Civic Invovlement Parent data set has three records of data.

APPENDIX D
PARENT PFI/CI CODEBOOK

PARENT PFI/CI CODEBOOK

This section of the manual contains the codebook for the NHES:96 Parent and Family Involvement in Education and Civic Involvement (Parent PFI/CI) data file. Prior to using the codebook and data file, readers should review chapter 6, Guide to the Data File and Codebook, and chapter 7, Data Considerations and Anomalies. Both of those chapters provide information that will make it easier for analysts to understand the layout of the data file and the variables that have been included.

For each data element, the question, variable label, file location, format, codes, value labels, frequency, unweighted percents, and weighted percents are presented. Readers should review figure 6-1 on page 15 and the accompanying text for a detailed description of the codebook entries. As the reader will see in reviewing that section, standard formats have been used, and the same inapplicable code (-1) is used for all variables.

The data file contains several types of variables that are useful for analytical and methodological applications. The list below indicates the types of variables, the page of the text on which a discussion of the variable type begins, and the codebook pages on which the variables can be found.

Variable set	Text Discussion	Codebook pages
System variables (includes ID)	Ch. 6, pp. 2	D-3
Household membership	Ch. 6, pp. 3	D-3 to D-13
Questionnaire items	Ch. 6, pp. 5	D-14 to D-75
Household characteristics	Ch. 6, pp. 6	D-75 to D-77
Derived variables	Ch. 6, pp. 6	D-77 to D-83
Weights, PPSU, and PSTRATUM	Ch. 6, pp. 12	D-83 to D-92
Imputation flags	Ch. 6, pp. 13	D-92 to D-134

In every survey, there are some apparent anomalies in the data. Such anomalies may occur because of reporting or recording error, but may also occur because respondents may report rare situations not normally anticipated. Chapter 7 of the text describes some real and apparent anomalies in the NHES:96 Parent PFI/CI data, as well as some data considerations that could be important for some analyses. Data users wishing to better understand the Parent PFI/CI data should review chapter 7.

APPENDIX E

DIRECTIONS AND CODE FOR LINKING DATA FILES

Linking the NHES:96 Data Files

It is possible to link information from the four distinct NHES:96 files. This process is clear once the structure of the file identifiers is understood. First, the types of identifiers found on the NHES:96 data files are discussed. In the NHES:96, there are **household** identification numbers (**BASEID**), interview **subject** identification numbers (**ENUMID**), and **interview** or case identification numbers (**BASMID**). In addition, two-digit **person numbers** are provided for household members within households. The household, interview, and subject identification numbers are first discussed and then the person numbers.

- **BASEID**, is the **household** identification number. This eight-digit identification number is the same for every data record within a household and is the case identification number for the Household & Library data file. It is also provided on the Parent PFI/CI file, the Youth CI file, and the Adult CI file to permit data users to form linkages between the files.

- **ENUMID** is the **interview subject** identification number and is composed of 10 digits. "Interview subject" identification means that this number is unique to the person who is the subject of the interview. For example, in the Parent PFI/CI data file, **ENUMID** is the ID number of the child or youth who is the *subject* of the interview. Thus, **ENUMID** is the same in the Parent PFI/CI interview about a given youth and in that youth's own Youth CI interview record. **ENUMID** appears in the Parent PFI/CI and Youth CI data files only.

- **BASMID** is the unique **interview** or case identification number and is composed of 12 digits. Each Parent PFI/CI, Youth CI, or Adult CI interview has this unique interview ID. The first eight digits of **BASMID** are the same as **BASEID** for the household to which the interview belongs. The first 10 digits of **BASMID** are the same as the **ENUMID** of the subject of the interview. Therefore, a Parent PFI/CI interview record and a Youth CI record about the same youth would have the same value for **ENUMID**, but each interview would have its own unique **BASMID**. For the Parent PFI/CI interview, the last two digits are 01; for the Youth CI interview, the last two digits are 02; and for the Adult CI interview, the last two digits are 03. **BASMID** is the variable specified as the case identification number when creating a WesVarPC analysis from the Parent PFI/CI, Youth CI, or Adult CI files (see chapter 3 of this volume for a discussion of variance estimation and WesVarPC.)

Two-digit person identification numbers are provided on each of the NHES:96 data files in order to permit data users to copy information about certain individuals across interview records. In developing the public use data files, care was taken to include those person-level variables that were most likely to be needed by analysts. For example, the educational attainment of and languages spoken by the child's parents are included on the Parent PFI/CI file, since these parent characteristics are likely to be of interest to many analysts. These characteristics of subject adults are also included on the Adult CI file. In addition, since household characteristics (such as own/rent and income) are likely to be of interest to many analysts, these variables are contained on all four of the NHES:96 data sets and it is not necessary to copy them from the Household & Library file to the Parent PFI/CI, Youth CI, or Adult CI data files.

However, there may be circumstances in which an analyst would like to copy data items about a household member from one file to another. In order to facilitate linkages between the NHES:96 data files for the purpose of merging person characteristics, individual person numbers are provided on the data files. These two-digit numbers represent the number assigned to the person during enumeration of the household, i.e., 01 for the first person listed by the Screener respondent, 02 for the second person, etc.

- **PNUM(*n*)** is the two-digit person number variable in the Household & Library file. As noted above, many individual characteristics appear on this file for each household member, and these characteristics have sequential numbers, e.g., AGE1, AGE2, AGE3, and so on. Similarly, PNUM(*n*) carries the same sequential numbers in the variable name, so that it appears as PNUM1, PNUM2, PNUM3, etc. PNUM(*n*) contains the number assigned to each household member at the time of enumeration,

  NOTE: *The value of PNUM(n) is not the same as the sequential number it carries in its variable name*. That is, PNUM1 is not necessarily equal to '01,' PNUM2 is not always equal to '02,' etc. There are two reasons for this. First, during data collection and data preparation, household members who were originally enumerated may have been deleted because they were later determined not to be household members according to the study definition. The enumeration numbers assigned to the household members were not changed when this occurred, because doing so would have disrupted linkages between segments in the hierarchical CATI data base. Second, after imputation of person-level records, the household members were sorted by age, oldest to youngest, before constructing the rectangular Household & Library file.

- In the Parent PFI/CI and Youth CI data files, four two-digit person numbers are provided -- **MOMNUM** for the child's mother (if any), **DADNUM** for the child's father (if any), **RESPNUM**, the person number of the respondent to the Parent PFI/CI interview, and **CHILDNUM** for the subject child or youth. If the mother or the father was the respondent to the Parent PFI/CI interview, MOMNUM (or DADNUM) will have the same value as RESPNUM.

- In the Adult CI data file, the person number for the sampled adult is contained in **PERSNUM**.

In order to effectively approach linkages between NHES:96 data files, it is important to remember the structure of the NHES:96 sample. Every household with a completed Screener interview has a household record in the Household & Library file. Therefore, every Parent PFI/CI, Youth CI, and Adult CI data record belongs to a household that is also represented in the Household & Library file. Because the Youth CI interview was only attempted if the corresponding Parent PFI/CI interview was completed, every Youth CI interview has a corresponding Parent PFI/CI record. As noted earlier, the sample of telephone numbers for the NHES:96 was split, and 95 percent was assigned to Parent/Youth interviewing and 5 percent was assigned to Adult CI interviewing. As a result, there are no Parent PFI/CI or Youth CI interviews for which there is an Adult CI interview in the same household.

The following examples are provided for the general populations for each component. Data users should consider the following tips regarding the length of time required to run a program and use of disk space:

- The data files are provided in ID order -- all of the following examples present code for sorting data files prior to linking (merging). Sorting the files can take up considerable time and disk space. If the files are already in the order required by the analyst, sorting is unnecessary.

- Keep only the variables required for your analysis -- specifying only the variables needed for the analysis will significantly improve the speed of the linking and the created data file will use less disk space. The use of a KEEP option, demonstrated in some of the following examples, can be used for this purpose.

- Keep only the relevant records -- when linking, for example, the Parent PFI/CI file with the Household & Library file, a match for every parent can be found that will bring together the Parent PFI/CI variables with the parents' related Household & Library variables. However, there are additional records in the Household & Library file unrelated to the Parent PFI/CI file, i.e., household information on respondents found in the Adult CI and Youth CI files. The example on **Linking between Parent PFI/CI and Youth CI files** demonstrates a technique for dropping unwanted records resulting from such a merge; in the SAS example note the use of the ONPARENT variable and in the SPSS examples the INPARENT recode.

Linking between Parent PFI/CI and Youth CI files is straightforward. The common identifier (key) is the ENUMID, and is available on both files. Sample SAS code to bring together these two files follows:

```
DATA TEMP;
MERGE parent_filename (IN=ONPARENT) youth_filename (IN=ONYOUTH);
BY ENUMID;
RUN;
```

Sample SPSS for DOS code is:

```
SET MORE = OFF

GET FILE = 'youth file'.
SORT CASES BY ENUMID.
SAVE OUTFILE = 'temp'.

GET FILE = 'parent file'.
SORT CASES BY ENUMID.

JOIN MATCH FILE = */FILE = 'temp'
   /BY ENUMID
   /MAP.
SAVE OUTFILE = 'merged file'.
```

Sample SPSS for Windows code is:

```
GET FILE = 'youth file'.
   /KEEP = ALL.
SORT CASES BY ENUMID.
SAVE OUTFILE = 'temp'.

GET FILE = 'parent file'.
   /KEEP = ALL.
SORT CASES BY ENUMID.

MATCH FILES FILE = */FILE = temp
   /BY ENUMID
   /MAP.
SAVE OUTFILE = 'merged file'.
```

Linking between the Household & Library file and the Parent PFI/CI, Youth CI, or Adult CI files requires using the key common to both files. This is accomplished using BASEID, which appears on all data files. The following example shows how to join selected library items from the Household & Library file with the Parent PFI/CI file and retain only records from the Parent PFI/CI file. Similarly, the Youth CI or Adult CI file can be substituted where references to the Parent PFI/CI file are made to allow joining library items with that file. Example SAS code to bring these files together follows:

```
DATA TEMP;
MERGE parent_filename (IN=ONPARENT) household_and_library_filename (KEEP = BASEID LCOMP LCONSUME
LDISTANC LJOBHELP);
BY BASEID;
IF ONPARENT;
RUN;
```

Sample SPSS for DOS code is:

```
SET MORE = OFF

GET FILE = 'household & library file'
   /KEEP = BASEID LCOMP LCONSUME LDISTANC LJOBHELP.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp'.

GET FILE = 'parent file'.
COMPUTE INPARENT = 1.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp2'.

JOIN MATCH TABLE='temp'
   /FILE='temp2'
   /BY BASEID
   /MAP.

SELECT IF (INPARENT = 1).
SAVE OUTFILE = 'merged file'.
```

Sample SPSS for Windows code is:

```
GET FILE = 'household & library file'
   /KEEP = BASEID LCOMP LCONSUME LDISTANC LJOBHELP.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp'.

GET FILE = 'parent file'
   /KEEP = ALL.
COMPUTE INPARENT = 1.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp2'.

MATCH FILES TABLE ='temp'
   /FILE='temp2'
   /BY BASEID
   /MAP.

SELECT IF (INPARENT = 1).
SAVE OUTFILE = 'merged file'.
```

Linking between selected household member characteristics and the Parent PFI/CI file requires the use of household member person numbers. (The same approach can be used to link person-level variables in the Household & Library file with the Youth CI and Adult CI data files.) As noted above, the household member person numbers on the Parent PFI/CI file are stored in the variables CHILDNUM, MOMNUM, DADNUM, and RESPNUM. On the Household & Library file, the characteristics of household members have been stored in arrayed fields that number from 1 to 16, for example MARITL1-MARITL16 gives the marital status of each household member. Household member numbers have been stored in the fields PNUM1-PNUM16 on the Household & Library file. To determine the marital status of the child's father, each PNUM(*n*) field must be compared to the value of the DADNUM field and the corresponding arrayed MARITL(*n*) field contains the father's marital status, for example, if DADNUM equals the value in PNUM5, then the MARITL5 field contains the father's marital status. Building on the preceding code, the following code demonstrates a way this can be accomplished in SAS. Note that characteristics can be determined for the child, mother, or interview respondent by substituting CHILDNUM, MOMNUM, or RESPNUM for references to DADNUM in the following code.

```
DATA TEMP;
MERGE parent_filename (IN=ONPARENT) household_and_library_filename (KEEP = BASEID PNUM1-PNUM16
MARITL1-MARITL16);
BY BASEID;
IF ONPARENT;
/* determine which element contains dads info and assign dads marital status to DADSMAR */
IF DADNUM = PNUM1 THEN DADSMAR = MARITL1;
ELSE IF DADNUM = PNUM2 THEN DADSMAR = MARITL2;
ELSE IF DADNUM = PNUM3 THEN DADSMAR = MARITL3;
ELSE IF DADNUM = PNUM4 THEN DADSMAR = MARITL4;
ELSE IF DADNUM = PNUM5 THEN DADSMAR = MARITL5;
ELSE IF DADNUM = PNUM6 THEN DADSMAR = MARITL6;
ELSE IF DADNUM = PNUM7 THEN DADSMAR = MARITL7;
ELSE IF DADNUM = PNUM8 THEN DADSMAR = MARITL8;
ELSE IF DADNUM = PNUM9 THEN DADSMAR = MARITL9;
ELSE IF DADNUM = PNUM10 THEN DADSMAR = MARITL10;
ELSE IF DADNUM = PNUM11 THEN DADSMAR = MARITL11;
ELSE IF DADNUM = PNUM12 THEN DADSMAR = MARITL12;
ELSE IF DADNUM = PNUM13 THEN DADSMAR = MARITL13;
ELSE IF DADNUM = PNUM14 THEN DADSMAR = MARITL14;
ELSE IF DADNUM = PNUM15 THEN DADSMAR = MARITL15;
ELSE IF DADNUM = PNUM16 THEN DADSMAR = MARITL16;
RUN;
```

Sample SPSS for DOS code is:

```
SET MORE = OFF
GET FILE = 'household & library file'
   /KEEP = BASEID PNUM1 TO PNUM16 MARITL1 TO MARITL16.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp'.

GET FILE = 'parent file'.
COMPUTE INPARENT = 1.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp2'.

JOIN MATCH TABLE='temp'
   /FILE='temp2'
   /BY BASEID
   /MAP.

SELECT IF (INPARENT = 1).

IF (DADNUM = PNUM1)  DADSMAR = MARITL1.
IF (DADNUM = PNUM2)  DADSMAR = MARITL2.
IF (DADNUM = PNUM3)  DADSMAR = MARITL3.
IF (DADNUM = PNUM4)  DADSMAR = MARITL4.
IF (DADNUM = PNUM5)  DADSMAR = MARITL5.
IF (DADNUM = PNUM6)  DADSMAR = MARITL6.
IF (DADNUM = PNUM7)  DADSMAR = MARITL7.
IF (DADNUM = PNUM8)  DADSMAR = MARITL8.
IF (DADNUM = PNUM9)  DADSMAR = MARITL9.
IF (DADNUM = PNUM10) DADSMAR = MARITL10.
```
